

8 Using Atomberg Fan with Amazon Alexa

The Name:

It is best advised to select a simple name for your Atomberg fan, as Google Assistant and Alexa may find it difficult to recognise its name and may end up failing to execute the commands.

Kindly follow these guidelines:

1. A short name consisting of one or two names is ideal.
2. Names consisting of numbers do work, but they may not always be recognised by your home assistant. For example, "two" can be confused with "too", and may therefore lead to an invalid command.
3. Please try to avoid vernacular names. The language engine in your home assistant may not fully understand the command.
4. Please make sure the name is easy to pronounce and understand.

- a. Atomberg fan works with voice command using **Amazon Alexa**.
- b. To set up device with Amazon Alexa, your Amazon Alexa device must be connected to your smartphone using the Amazon Alexa app, and connected to the same network to which your fan is connected.
- c. Go to the Amazon Alexa app on your smartphone.
- d. Go to the Devices Tab.
- e. Select "User Smart Home Skills".
- f. Click on "Enable Smart Home Skills".
- g. Search "Smart Life" and enable it.
- h. Login with the same credentials you used while logging in with the Atomberg app.
- i. Once authenticated, you will see the device added on the Amazon Alexa app.
- j. Your Atomberg fan now is ready to be used with your Amazon Alexa app.
- k. Sample commands to be used with Amazon Alexa,
